Personas

Eric | 28 years | Content Creator | Thrill Seeker

Background

Eric is a content creator eager to capture visually compelling footage of the estate and gardens for his audience.

Goals

- Find the most scenic locations on the grounds and gardens.
- To know in advance whether conditions are good to capture content.
- Access specific details if, and when he needs them.
- Navigate the grounds efficiently without sacrificing safety or equipment.

Pain Points

- Frustrated that the map only offers standard navigation and does not feature visually distinct areas.
- Losing signal when he's trying to post content.
- Stressed when crowds or restricted areas limit his ability to capture the content he came for.

"Where is the most photogenic spot on the grounds?"

As a visitor to Cheekwood Estate & Gardens, so that I can determine which area of the grounds will have the best views for content creation, when I ask the tour guide where the best lighting is at the time of day I am visiting, the system should tell me the location, open a map and pin the area.

As a content creator looking to capture visually compelling footage at Cheekwood Estate and Gardens, so that I can plan my visit around peak photogenic conditions before arriving, when a user searches for "scenic photography spots" or selects a location on the estate map, the system should display a curated list of visually distinct areas with sample images, current lighting and crowd-level indicators, and any restricted zones where filming is not permitted.

As a visitor to Cheekwood, so that the app can help me work on a specific creative agenda, when I want to identify the most visually compelling areas of the estate to capture footage that will perform well with my audience before I waste time walking to the wrong spot, the system should guide me to appealing areas.

As a content creator visiting Cheekwood Estate & Gardens, so that I can plan my shoot around peak photogenic conditions before arriving on the grounds, when a I search for scenic spots or selects a location on the estate map, the system should return a curated list of visually distinct areas with sample images, current lighting conditions, live crowd level indicators, and clearly marked restricted zones where filming is not permitted from any screen.

⭐ As a visitor to Cheekwood Estate & Gardens, so that I can get answers to questions about the site, when I type a question into the AI chat, the system should return a response grounded in the site's uploaded documentation.

As a visitor to Cheekwood Estate & Gardens, so that I can identify the most scenic stops on the tour, when I navigate to the Stops section of the visitor app, the system allow me to filter the map and list to only show scenic stops.
