Personas

Franny | 64 years | Retired | Avid Naturalist

Background

Franny loves to visit arboretums. However, she has mobility limitations and is visiting Cheekwood Estate and Gardens for the first time.

Goals

- Wants an experience that feels designed with her in mind.
- She wants to enjoy the full experience without feeling like a burden.

Pain Points

- Anxious about unexpected physical barriers or difficult terrain appearing mid-visit.
- Frustrated if accessibility information is inaccurate or outdated.

"I wish I had known about this route before we started walking."

As a visitor to Cheekwood Estate & Gardens, so that I can find all the paths where one can easily traverse and that connect so there are no broken routes, when I ask the AI where is the best route to take to get to the manor, the system should show a map of the most direct accessible route is to get there. If there are alternate routes, the system should display those options as well.

As a visitor to Cheekwood Estate & Gardens, so that I can listen to the details of the exhibit I want to see, when I ask the AI tour guide to read them to me as I walk, the system should (if using for the first time) prompt me to select a voice from several options, then the system should read out the details stored in its database.

As a first-time visitor with mobility limitations, so that I can enjoy the full Cheekwood Estate experience without worrying about physical barriers, when a user enables the accessibility filter on the interactive map, the system should highlight only wheelchair-accessible pathways, flag any elevation changes or uneven surfaces, and display real-time notices about temporary closures along accessible routes.

I am visiting Cheekwood for the first time, so that I can focus on navigating the grounds safely without physical barriers interrupting my experience, when I ask the app to physically guide me through the estate in a way that accounts for my mobility limitations before I encounter a problem, the system should do map out the best direction to take.

⭐ As a visitor to Cheekwood Estate & Gardens, so that Franny can move through the estate confidently without encountering unexpected physical barriers along her route, when a user enables the accessibility filter on the interactive map, the system should highlight only wheelchair accessible pathways.

As a visitor to Cheekwood Estate & Gardens, so that I can be informed of site amenities, when I navigate to the Amenities section of the visitor app, the system should show me a map and list of amenities including restrooms & dining options.
