Scarlett 36 years | Experience Coordinator | Caring Advisor

Background

A visitor experience coordinator at Cheekwood Estate & Gardens. She focuses entirely on people. She is the human layer ensuring that what the system delivers meets the needs of every guest who walks through the gates.

Goals

- Wants every visitor to the estate and gardens find what they need, without having to ask for directions.
- Wishes to reduce the volume of repetitive questions her office receives.

Pain Points

- Overwhelmed at the beginning of seasonal exhibits where gaps are revealed in the currently available information and what's needed.
- Frustrated when she must rely on other individuals to make updates she cannot control directly.

"If a visitor can't find an accessible route easily, then I've failed."

As an administrator of the tour guide app for Cheekwood Estate & Gardens, so that visitors can view handicap accessible routes, when I tell the system where the best route is to peruse the gardens, and also get to the manor, while ensuring the terrain is handicap accessible, the system should allow me to upload the map and tell it where to pin all the paths and trails where one can easily traverse.

As an administrator of the tour guide app for Cheekwood Estate & Gardens, so that visitors can learn the details of the latest exhibition, when I upload a document about the exhibit, the system should analyze text and images and retain details to be supplied on demand to the visitor upon request.

As an admin managing accessibility content, so that visitors with mobility needs always receive accurate and up-to-date route information, when a staff member submits an update to an accessible pathway's status (e.g., closed, reopened, or re-routed), the system should immediately reflect the change on all user-facing maps and push an in-app notification to any visitor who has the accessibility filter active.

⭐ As an administrator of the tour guide app for Cheekwood Estate & Gardens, so that visitors can receive accurate and relevant information through the AI chat, when I upload a document such as a brochure or FAQ sheet, the system should process the document and make its contents available to the AI chatbot for answering visitor questions.

⭐ As an admin at Cheekwood E&G, so that visitors with mobility needs always receive accurate and up-to-date route information, when I flag an inaccessible locations for maintenance, the system should update the map with a warning for visitors to view.
